

STAKD.finance

Binance Smart Chain ecosystem project that aims to provide all in one DeFi solution to the emerging BSC community..

Powered by Binance Smart chain.

**BINANCE
SMART CHAIN**

STAKD

Powerful DeFi ecosystem on Binance Smart Chain that wants to revolutionize the DeFi sector on BSC by providing all in one solution for everyone. We are aiming to create a solid competitor to Ethereum DeFi projects and want to be an integral part of BSC Ecosystem. STAKD suite plans to create following solutions on BSC until the end of 2021:

LIQUIDITY MINING AND FARMING

REBASE MECHANISM WITH FAILSAFE PROTECTION

STAKING

STAKDSTARTER WITH 2 CONFIRMED PROJECTS

STABLECOIN YIELD FARMING

GOVERNANCE

STAKD VAULTS AND AUTO FARMING

WHY BINANCE SMART CHAIN?

With raising gas fees Ethereum has become a really inconvenient place to onboard new users and to build solutions on top of it. Binance Smart Chain products are underdeveloped compared to Ethereum solutions and with more and more users joining there will be a big need for DeFi solutions on the network.

Binance Smart Chain is a new blockchain with a full-fledged environment for developing high-performance decentralized applications. It was built for cross-chain compatibility with Binance Chain to ensure that users get the best of both worlds.

- **Binance Academy**

STAKD ECOSYSTEM STORY WILL BE POWERED BY BAB MECHANISM

Buyback and Burn (“BaB”) mechanism will be the core component of the STAKD ecosystem. All products will have BaB mechanisms implemented. Let's look at our core features and what kind of an impact they will have on the token circulation.

Yield Farming - sFARMS

Non-native farms will have 2% dev tax and 1.5% will be used for buyback of all tokens. If those farms lock for example \$10 Million. This gives 200,000 bUSD in tax and 150,000 bUSD will be used to buyback tokens from the market and destroyed.

Launchpad - stakdSTARTER

All Launchpad project raises will have a founder fee of 20%. All of those proceedings will result in a BaB mechanism. This means if a project will raise 1000 BNB via stakdSTARTER, 200 BNB will be used to buy \$STAKD from PancakeSwap and then destroyed forever.

Staking - sSTAKES

Non native pools will have similar dev tax like yield farming pools. Examples are then the same.

Limited edition NFTS

Together with partners we will design NFTs that will open up a new dimension for everyone involved in STAKD. With those NFTs users will get the ability to boost their farm, boost their allocation size on stakdSTARTER or boost their staking. There will be a limited number of those and all proceeds will go into buying tokens from the open market and destroying them.

STAKD Yield Farming - sFARMS

Yield farming, also referred to as liquidity mining, is a way to generate rewards with cryptocurrency holdings. In simple terms, it means locking up cryptocurrencies and getting rewards. - **Binance Academy**

STAKD doesn't want to be just another project with high APY farming and no meaning by adding a proper structure and deflation into the creation of the pools. STAKD plans to open with 3 native pools and have 7 major BSC pairs that you can acquire a token with. On the native side there will not be any fee to farm and the %APY will be the highest of all pools. On the BSC pairs for example \$CAKE/\$BNB pair we will implement the 2% developer tax.

Developer tax will divide into two equal parts. One part will be used for buyback and burn (BaB mechanism) from \$STAKD tokens on the market and second part will go into the developer and partner fund.

STAKD Rebase Mechanism - sBASED

sBASED is based on the concept of creating an elastic supply token. With AMPL being the first mover and the market and also biggest elastic currency out there, the sBASED aims to be even better and fairer to the community.

What sBASED will take from other elastic currencies is a rebase model. The unique proposition is a two way rebase which is soft pegged to the PancakeSwap Total Value locked and 24-hour volume of crypto market cap. We are adding an extra factor to the rebase which is now tied to two different variables. Price of the token will thus play no value in the rebase process. To prevent death rebase spiral we will implement the following failsafe: In case three negative rebases happen the 4th rebase will always be a positive 4% rebase.

*An elastic supply (or rebase) token works in a way that the circulating supply expands or contracts due to changes in token price. This increase or decrease in supply works with a mechanism called rebasing. When a rebase occurs, the supply of the token is increased or decreased algorithmically, based on the current price of each token. - **Binance Academy***

Launchpad - stakdSTARTER

As there is a plan to create a whole STAKD ecosystem we will also create a Launchpad on the model of successful Ethereum projects and applicate it on the Binance Smart Chain. As the token raises are happening everyday there is really a lot of information that binance community needs to digest. Holding \$STAKD tokens will give you a ticket to token sales that will be verified by STAKD technologies research.

StakdSTARTER will act as the final bridge between early-stage projects and the community before the project goes fully public. If a project is making an offering on the StakdSTARTER platform, it's most likely the final stage before listing on Pancakeswap.

There will be additional benefit for the whole \$STAKD ecosystem and this will be **20% RAISE TAX** that will be used to market buy native tokens and burn them. (BaB mechanism)

We are pleased to say that we already have two projects that we are already working with and their raises will happen in the next two months.

Governance - stakdDAO

Governance - stakdDAO will be a key of \$STAKD ecosystem. With all things having an effect on the token and it's token price we plan to give enough power to STAKD community in making decisions that will shape the future of the project. We are expecting to give community power on voting examples: new Launchpad projects, adding additional pools to sFARMS, changing %APY on specific farms and more.

Governance tokens are tokens that developers create to allow token holders to help shape the future of a protocol. Governance token holders can influence decisions concerning the project such as proposing or deciding on new feature proposals and even changing the governance system itself. - **CoinMarketCap**

First Quarter 2021:

- ▶ Seed Round takes place
- ▶ Private Round takes place
- ▶ Public Round takes place
- ▶ Listing on PancakeSwap
- ▶ sFarms go live with chef timelock
- ▶ sBASED goes live
- ▶ STAKD Staking goes live
- ▶ First Launchpad
- ▶ Smart Contract Audits

Third Quarter 2021:

- ▶ Stablecoin Yield Farming goes live (Bridge with ethereum stablecoins)
- ▶ Launchpad #4 and #5 happens
- ▶ Community Activity#2
- ▶ Governance proposals go live
- ▶ Launch of STAKD Autofarm
- ▶ Marketing activities
- ▶ Goal is to achieve: 5000 Token Holders

Q1

Q2

Q3

Q4

Second Quarter 2021:

- ▶ Announcement of NFT partner (NFT use case is to boost all STAKD products)
- ▶ Secondary market products (Binance Smart Chain crypto indices)
- ▶ Community Activity#1 (Governance forum goes live)
- ▶ Launchpad Project #2 and #3 happens
- ▶ Marketing activities (TikTok, YouTube, Twitter, Guerilla Marketing)
- ▶ Goal is to achieve: 2000 Token holders

Fourth Quarter 2021:

- ▶ Collaboration with leading swap protocols to create a dedicated SWAP platform
- ▶ STAKD Vaults will go live
- ▶ Community activity#3
- ▶ Listing on TOP 5 exchange preferably binance innovation zone
- ▶ Rebase 2.0
- ▶ Mobile Applications
- ▶ Goal is to achieve: 10000 Token Holders

TOKEN SALE

Token name: **\$STAKD**

Token type: **BEP20**

Total supply: **2,000,000 STAKD**

Soft cap: **500 BNB**

Hard cap: **2000 BNB**

SEED

**1 BNB = 200 STAKD
60,000 TOKENS
5-20 BNB CAP
300 BNB RAISE**

PRIVATE SALE

**1 BNB = 120 STAKD
84,000 TOKENS
1-10 BNB CAP
700 BNB RAISE**

PUBLIC SALE

**1 BNB = 100 STAKD
100,000 TOKENS
0.5-10 BNB CAP
1000 BNB RAISE**

TOKEN METRICS

Seed round	60,000	50% Unlocked on TGE followed by 50% after 1 month
Private round	84,000	80% Unlocked on TGE followed by 20% after 1 month
Public sale	100,000	Unlocked on TGE
PancakeSwap Liquidity	20,000	Unlocked on TGE to stabilize the price
Farming and staking	1,500,000	Proportional unlock
Marketing fund	60,000	15,000 Unlocked on TGE followed by monthly unlock for 10 months
Airdrops and activities	20,000	5,000 Unlocked on TGE followed by monthly unlocks
Development	56,000	Development tokens are unlocked each week for the first 7 weeks
Team	100,000	Team tokens are locked for 6 months and then have 10 monthly unlocks
